

SIP SOLUTIONS

Integrated Services

Next Generation Technology

SIP Solutions provides flexible options and product bundles to meet the needs of your business. Voice services include SIP trunking to a certified IP-PBX with multiple compression options. SIP Solutions is also available with traditional business lines, digital trunking, or PRI handoffs to a traditional PBX. Over every SIP Solutions connection, Integra provides Quality of Service (QoS) to ensure voice quality and priority, and to maximize data bandwidth.

Features

Features	Benefits
SIP Solutions is an integrated service that can combine voice and data on a single Ethernet connection	The need to maintain separate voice & data networks is eliminated, allowing more efficient use of bandwidth.
Dynamic bandwidth allocation	Internet bandwidth availability increases when voice sessions are not in use.
Combines traditional voice services such as PRI and Business Lines on a single connection	No separate circuits required.
Multiple compression options to choose from.	Maximize capacity by placing more calls over the same bandwidth with no need for additional circuits.
IP PBX certification program	Vendor provided interoperable documentation to ensure smooth installation.
Multiple access bandwidth available on copper, T1 and on-net metro fiber	Flexible bandwidth to meet your growing telecommunication needs.

Why Integra?

- » Integra delivers a broad range of services, from high-speed transport to traditional voice and data services.
- » Integra has engineered our Internet backbone with virtually unlimited scalability and we offer a variety of bandwidth and billing options to meet your business objectives.
- » Integra owns our network, never reselling another carriers' service, offering rapid response and immediate service. There is no need to troubleshoot issues or coordinate repairs with third party providers. We are at your service 24/7.
