XIPCloud™ Storage: It's Cloud, Only Faster

As a state-of-the-art enterprise, you pride yourself on staying ahead of the technology curve. Your industry is heading towards cloud computing, yet you are skeptical about moving all applications to the cloud. Data storage requirements are constantly changing, and adding extra file servers to handle future growth is expensive. You are concerned that if you choose the wrong solution, a lack of open standards may lock you into a vendor for life.

The Internap Solution

Our XIPCloud Storage was designed with performance in mind. Located in secure Internap data centers, XIPCloud Storage offers unlimited storage capacity, on-demand access and utility billing. The open standards based service provides an extensive open API and a variety of tools to manage your data with the security you expect and the performance you require. No more vendor lock-in. No more burdensome storage equipment costs.

The Internap Difference

Backed by our patented Performance IP™ service, XIPCloud Storage is architected to deliver maximum performance while minimizing latency across the Internet to your end user. We built this solution on OpenStack™, an open technology platform developed by an international community, to promote interoperability and eliminate vendor lock-in. XIPCloud Storage was designed to solve storage problems, giving you flexible solutions from primary file storage to backup and archival. The Performance IP service, triple file replication and redundant data center architecture protects your business information while making it available when you need it.

Standard Pricing	
Monthly Storage Usage	\$0.15 per GB
Bandwidth Usage	
Data Transfer "In"	\$0.00 per GB*
Data Transfer "Out"	\$0.15 per GB
Data Transfer "Out" to CDN	\$0.15 per GB (when available)

*\$0.00 promotional pricing offered through 7/31/2011, standard inbound transfer pricing will be charged at \$0.05/GB

Contact us to learn how Internap can solve your IT challenges by enabling you to focus on your core business, improve service levels and lower the cost of IT operations.

XIPCloud Storage Benefits

- **Unlimited storage capacity, on-demand access and utility billing**, gives you the flexibility to do business your way.
- Multi-layered approach to security including **SSL-encrypted access** to the platform for secure data transfers.
- **OpenStack based platform** facilitates a selection of third-party tools that work seamlessly together, **simplifying your integration efforts** and **eliminating vendor lock-in**.
- **Proprietary Managed Internet Route Optimizer™ (MIRO)** technology provides faster and more reliable traffic delivery over the Internet, **overcoming limitations** of traditional routing policies by **monitoring performance** of each Internet backbone and dynamically routing traffic across the **best available path**.
- Tier II-rated data center facilities provide **N+1 redundancy** and **SAS 70 Type-II controls** and processes, ensuring that your files and content are available when you want them, regardless of your location.
- Industry-leading **Service Level Agreement supports 100% uptime**, maximizing your performance and availability.

XIPCloud Storage Features

Security and Data Protection. XIPCloud Storage is a highly-redundant cloud storage platform, which replicates your files, providing multiple copies across redundant platform zones. Through a layered security approach, including SSL encryption for the transmission of files to XIPCloud Storage, sensitive files are protected at all times. In addition, we constantly monitor for file and system integrity, ensuring the utmost in system security.

Route Optimized Delivery. XIPCloud Storage utilizes our Performance IP service to optimize storage delivery, performance, reliability and predictability. By leveraging MIRO, we continuously track and analyze data collected from more than 200,000 destination prefixes and up to 11 Internet backbones. We dynamically and automatically navigate stored content around network congestion, poorly performing links and disabled providers to maximize overall performance.

Open Standards Based. XIPCloud Storage is based on OpenStack's open source cloud storage platform and the OpenStack API. The OpenStack API allows you to create a direct link between your application and your online file storage location. You can now take advantage of a growing ecosystem of third-party tools, avoiding the vendor lock-in commonly associated with proprietary APIs.

World-Class Support and SLA. Internap is known for its world-class support. Through fully-redundant Network Operations Centers, our experts work tirelessly to monitor our data centers, networks and IT infrastructure to support your business needs. We back up that technology and support with our SLA, which is based on 100% network uptime availability.

Premium Data Center Architecture. Our data centers sit on the edge of the most robust network backbone available. Our secure SAS 70 Type-II audited facilities, conveniently located in major metropolitan areas, feature N+1 redundancy for both power and cooling, maximizing network availability.

Why Internap?

Since 1996, thousands of customers have trusted Internap to provide high-performance IT infrastructure services that enable them to focus on their core business, improve service levels and lower the cost of IT operations. Internap's colocation, connectivity, managed hosting and cloud solutions are differentiated by unparalleled levels of performance, availability and support.
