Ideal Customer Profile:

Ideal candidates for this service include any company that requires frequent communication among multiple locations, between geographically diverse vendors and customers, and/or telecommuting employees.

CPE Requirements:

There is no additional CPE required.

AUDIO CONFERENCING | In Brief

Product Description

PAETEC's Audio Conferencing is a voice conferencing system, facilitating efficient and cost-effective communication. Customers are assigned a toll-free access number, a unique, permanent bridge number, and a chairperson access code, allowing for reservation-less audio conferencing. There is no charge for owning a conference bridge. Customers are only charged for actual service usage. The total cost of a conference call is based on the length of the call and the number of participants.

Product Capabilities

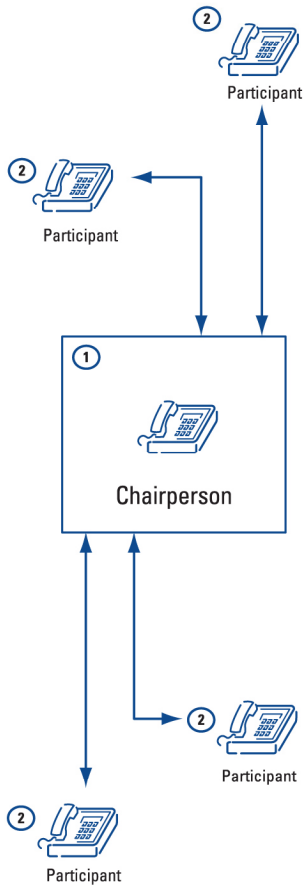

Reservation-less communication – participants can initiate meetings anytime, anywhere, with anyone.

Operator – the chairperson can reach an operator for questions and help at any time.

Features – the chairperson can control calling features, such as muting, and track participants during the call.

Security features – security codes can be assigned to specific calls, locking unwarranted individuals from entering a sensitive conference.

96 participants – a chairperson and 95 individuals can participate in a single call.

Application One

Mike’s Marketing Corporation employs over a hundred individuals in 14 offices throughout the Northeast and Midwest. Project managers, responsible for leading teams of up to 25 individuals, are frequently required to communicate with other members for spur of the moment discussions, as well as manage weekly product status meetings. PAETEC’s Audio Conferencing allows Mike’s Marketing Corporation to initiate sizable and reservation-less audio conferences with as many as 96 individuals in a single call.

Application Two

The CEO of Nevada Networks Inc. requires attendance at her weekly sales conference calls, but was unable to track participants during the calls. With PAETEC’s Audio Conferencing, she can identify who is on the call and track their entrance and departure. If she decides to implement PAETEC’s Web Conferencing in the future, she would also be able to view where each participant is calling. As the call chairperson, she can assign additional security codes to select participants and administer a lock to sensitive conference calls once all the participants have joined the call. Additionally, she has the ability to change the conference pass code at her convenience, ensuring highest security.

Application Three

Since Illinois Industries has implemented PAETEC’s Audio Conferencing, they have decided to initiate client informational Webinars. Adding Web Conferencing to their current service has allowed Illinois Industries to simultaneously share visual presentations and audio information during planned conference calls. To address larger, higher-end conferences, they utilize PAETEC’s Event Conferencing, a reservation-based service.
