

MANAGED SECURITY SERVICE

Managed Security is a comprehensive, multi-layer service that safeguards your network and information assets.

Protect your network with fully managed, 24x7 network security, monitoring and support. Built on our network of carrier-class gateways, our Managed Security service works as a complete solution or as a complement to your existing premise-based solution.

Managed Security includes Managed Firewall, Intrusion Prevention, Anti-Virus, Anti-Spyware, Spam Tracker, Web Filtering, and Personal Protection Suite. These services work together to minimize downtime from individual threats, reduce risks with blended threats, and coordinate security alerting, logging and reporting. While CPE-based solutions will block attacks to protect your LAN, these attacks can still saturate the last-mile connection and render your connection unusable. Managed Security identifies and stops malicious traffic before it enters your network, ensuring that the bandwidth you purchase is not degraded by malicious traffic.

NO-HASSLE MANAGED SERVICE. Managed Security is a fully managed solution with turnkey deployment. You don't have to buy new equipment or hire new employees to enjoy all the benefits. Our service protects your network around the clock and includes comprehensive reporting to help you optimize your security policies.

REDUCE COSTS. By improving network uptime, optimizing performance, and simplifying threat management, Managed Security lowers your total cost of ownership. It also streamlines compliance with complex government security regulations, reducing administrative costs.

PROTECT YOUR BUSINESS. With continually updated signature lists and databases, rapid threat solution discovery, and automatic updates, Managed Security protects the continuity of your business, defends your company's assets, and helps preserve the reputation of your brand.

Unbeatable Experience.

We've been serving businesses with innovative communications services for 16 years.

Superior Customer Support.

Our friendly technical experts respond quickly and efficiently 24/7/365.

COMPONENTS OF MANAGED SECURITY SERVICE

Managed Security is an optional service available with new or existing DSL, MPLS, T1, Ethernet or Bonded T1 service. All Managed Security service components are hosted in our state-of-the-art data centers, providing highly resilient protection that most IT departments cannot attain on their own.

SERVICE COMPONENT	DESCRIPTION
Managed Firewall	Detects and blocks suspicious network traffic. Protects against unauthorized users, dangerous protocols, and common network layer attacks.
Intrusion Prevention	Proactive protection against known and emerging threats, including worms, viruses, Trojans, DoS, DDoS, SQL injections, and other blended threats.
Anti-Virus/ Anti-Spyware	Provides comprehensive real-time network protection against worms and spyware from both inbound and outbound security threats. Stops unwanted malware before it reaches your network.
Spam Tracker	Detects and manages spam on end-user desktops, automatically redirecting it to a separate email folder. Eliminates productivity loss, network impact, and management costs associated with unwanted email.
Web Filtering	Allows you to manage employee Internet access and prevent inappropriate use of corporate bandwidth with White list/Black list and/or content filtering.
Personal Protection Suite	Provides managed protection for every computer connected to your network, ensuring that compromised laptops cannot infect other computers.
