

MANAGED SSL VPN

Managed SSL VPN is a solution that provides secure, reliable mobile access to your business network. Managed SSL VPN can utilize both a software client and clientless web-based access.

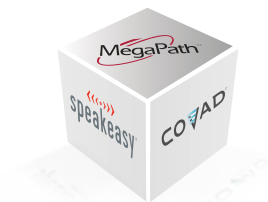

Now you can meet the increasing demand for mobile remote access with a secure and cost-effective solution. Managed SSL VPN service provides flexibility that is not available with IPsec VPN solutions, enabling authorized users to log in to your business network from any device with a standard Internet browser. Security administrators maintain fine-grained control of access permissions at the user level.

EASY TO INTEGRATE. Your Managed SSL VPN solution can be rolled out in just two weeks, far less time than it would take to build an infrastructure solution. Service can be fully integrated in your business network environment with complete monitoring and detailed reporting for regulatory compliance.

COST-EFFECTIVE. Managed SSL VPN service eliminates the need to buy or manage a remote access solution. Our experienced team performs the initial implementation and provides 24/7/365 monitoring and management of the system. This keeps support costs to a minimum and leads to a low total cost of ownership.

CUSTOMIZED. We offer three tailored SSL VPN products to meet specific business needs. Choose from Corporate Access SSL, Retail Access SSL, and Business Continuity SSL.
